

Minisiletto It 115

Size.520x520x h. 1309

Plastic tank with steel frame equipped with Miniboxer diaphragm pump, tap and filter with stainless steel connections with gasket and continuous compound recycling system from the pump to the tank itself.

This system is suitable for powering cleaning machines with up to 10 guns. This system avoids machine downtime when filling the tank in the event of a low quantity of abrasive product in it. The system is not under pressure so ISPEL testing is not necessary. The pressure is generated downstream of the pump with a compression ratio of 1/1.
